Profile:

Senior Full-stack Java Web Developer with a demonstrated history of working in the information technology and services industry. Skilled in microservices, cloud native applications, containers, distributed systems and scalable fullstack development.

Tips:

- Created a dynamic proxy for integration with more than 300 web-service methods in 3 months and saved the company from purchasing a new integration product.
- Designed a new message based batch job execution pipeline and decreased memory-consumption of the application.
- Implemented a new drag and drop featured application to increase the usability of model designer application.

Key Skills:

- **Programming Languages** : Java, C++
- **Java Frameworks** : Spring Boot, Spring Data JPA, Hibernate, JAX-WS, REST,JMS, JUnit
- **UI Technologies** : JSF, Xhtml, Primefaces, JS, ReactJS, ES6, Webpack, Babel, CSS, Html
- **C++ Frameworks :** QT
- **Operating Systems**: Linux and Windows

Work Experience :

Senior Java Software Engineer February 2024 – February 2026 (2 years)
Company: ING Hubs Türkiye

- Developed and maintained Java-based backend microservices using SpringReactor and Stream API.
- Implemented rest-end points for credit/debit/prepaid card activation and customer onboarding projects.
- Ensured system reliability and stability through reactive programming and DevOps best practices.
- Worked closely with other engineers, product teams, and stakeholders to deliver roadmap items.
- Contributed to continuous improvements in infrastructure, observability, and cost optimization.
- Implemented clean, maintainable, and testable code with strong focus on quality and performance.
- Participated in code reviews, technical design discussions, and cross-functional collaboration.
- Collaborated with team members in adhering to the acceptance criteria.
- Ensured timely and complete delivery of Product Backlog Item (PBI) work.
- Managed PBI analysis, development, and delivery processes.
- Led sprint planning, refinement, review, and retrospective processes.
- Ensured development activities complied with defined architecture, security, and quality standards.
- Ensured developed solutions were delivered in line with Definition of Done (DoD) criteria.
- Oversaw complete preparation of technical documentation.

- Proactively managed risks, dependencies, and blockers.
- Ensured accurate and timely preparation of sprint effort estimates.
- Participated in regular coordination meetings with customer teams and reported progress.
- Tracked team performance and took actions to improve productivity.
- Conducted technical interviews as part of hiring processes.
- Managed onboarding for new team members.
- Mentored the team to support technical growth and skill development.
- Provided support in defining and verifying the problems detected by any member of other project teams such as front-end devops and infra .

Tech stack:
- Java 21
- Spring Boot
- Hibernate
- Open Shift
- Kafka RabbitMQ
- JUnit Mockito
- Azure DevOps

Senior Java Software Engineer
Company: ING Türkiye December 2019 - February 2024 (4 years 3 months)

Description: Hands-on experience with Java programming and Spring Framework, SpringBoot, JPA and TDD.
- Used development tools like IntelliJ, Azure Devops, Sonar, Git, and Maven.
- Applied CleanCode principles, code review and pair programming for application development.
- Took part in containerized environment creation in order to ensure resilient and efficient deployments.
- Implemented event-driven architectures with Kafka integration.
- Architected and delivered internal tools and libraries that are well-defined, modular, secure, scalable, and actively maintained.
- Contributed across the full development lifecycle — from architecture and prototyping through testing, development, and support.
- Achieved modern software engineering practices through code and design reviews; applied DevOps principles for continuous delivery with high-quality telemetry.
- Evaluated emerging technologies through proof-of-concept work and recommend adoption where they fit platform needs.
- Lead design discussions and align teams on architectural and strategic decisions for shared platform components.
- Shared best practices and contributed to engineering culture.
- Mentored and coached developers to support their continuous growth.
- Empowered teams to build scalable systems with strict requirements on latency, availability, and/or throughput.
- Worked together with other engineering teams to understand their pain points to craft the right solution.
- Enabled teams to fully own their systems by providing them with the capabilities to seamlessly deploy and closely observe their applications.

Tech stack:
- Java 17
- Spring Boot
- Hibernate
- OpenShift
- Kafka RabbitMQ
- JUnit Mockito
- Azure DevOps

Senior Java Web Developer 08/2017–10/2019 (2 years 4 months)

Company: ERGO Türkiye

Description: ERGO Türkiye digital transformation project. Transforming existing monolithic application into microservices.

- Designed and developed insurance system modules from entities to Spring Rest Controller end-points by using Spring Boot 2.0.
- Applied Java 8 Stream API and lambda expressions to extract, filter and sort data from Lists and Collections.
- Implemented export to Excel feature by using Apache POI.
- Added pagination support to listing Rest API methods.
- Integrated client.js library to existing JSF-PrimeFaces application.
- Migrated existing JavaEE7 application from Weblogic 12.1 to Weblogic 12.2 .
- Provided 3rd level support for reported bugs and defects of existing JSF-PrimeFaces-EJB-CDI-JTA-JPA application by the QA team.
- Applied a test-driven-development (TDD) approach to software development.
- Developed unit tests for RestController and Service layer methods by using Spring Boot test modules such as Hamcrest matchers, Mockito and JUnit.
- Used EclipseLink with JPQL and Named Queries as JPA provider for entity model design and CRUD operations.
- Cooperated with Devops team for creation of docker container images from developed microservices.
- Contributed to the technical design document for new microservices design.
- Used Gradle and Maven for build and dependency management.
- Used Nexus as artifact repository and Git/SVN/Gerrit as source code management systems.
- Prepared documentation for REST API by using Swagger API Tool.
- Used Netflix Zuul for service discovery and API Gateway.
- Used Netflix Eureka server for the registry of microservices.
- Used Spring Cloud Config server to provide centralized configuration.
- Tested REST API with Postman.
- Created a proxy for translating SOAP to JSON.
- Used JS, HTML5, CSS3, ES6, Node.js, React.js, Redux, JSX, Webpack, Babel, for web app.
- Jenkins for CI/CD and Redis as cache.
- Messaging : JMS, IBM MQ.
- Job Scheduler : Quartz

Technology/Tools: Spring Boot, Cloud Components, Java

Senior Consultant and Java Developer 01/2016– 08/2017 (1 year 7 months)

Company: Metasis Teknoloji (as outsource at Yapı Kredi Bank Internet Banking Department)

Description: Yapı Kredi Bank platform upgrade project. Migrated existing business logic from PL-SQL to web-services.

- Front-end : Spring MVC, JSP, Custom Tag Lib, Html, CSS, JavaScript, JQuery, Ajax, JSON
- Back-end : Spring Core/AOP, Interceptors
- Persistence : JPA Hibernate
- Database : Oracle
- Database Programming : PL/SQL Function-Procedure-Trigger
- DB Tool : Toad for Oracle
- Web Services : Apache CXF for SOAP-WS Client Generation
- Messaging : JMS, IBM MQ
- IDE : Eclipse
- SCM : Git/EGit Eclipse Plugin, SVN, Subclipse, CVS
- Git Repository Manager : Atlassian Bitbucket
- Issue Tracker : Atlassian Jira
- CI/CD : Atlassian Bamboo
- Build Tool : Apache Maven
- Repository Manager : Sonatype Nexus
- Server : Apache Tomcat/WebSphere
- API Testing :SOAPUI JUnit
- Virtual Desktop : Citrix VDI
- Business Areas : Credit installments, Credit applications, Individual credits, Payments, Notes and Cheques, Merchants
- Work collaboratively with the architecture and development teams
- Provide reports on progress and problems
- Follow coding standards
- Migrate existing business logic from PL-SQL legacy system to Java
- Experience with Service Oriented Architecture (SOA)
- Experience collaborating with other teams to build scalable and fault tolerant solutions
- Experience mentoring junior software engineers to improve their skills and make them more effective, productive software engineers
- Move fast - ship to prod multiple times in a 2 week sprint.

Technology/Tools: Spring Core, Interceptors, JPA, Hibernate, JAX-WS, Apache CXF, Spring MVC, Html, CSS, JS

Senior Java Trainer 01/2015 –12/2015 (1 year)

Company: Bilge Adam IT Training Company

Description: Designing and delivering Java EE and Android application development courses. Delivered following courses to participants:

- Java SE 7 Programming Fundamentals with Eclipse
- Oracle Database Design and PL/SQL Programming
- JavaScript and jQuery Programming
- Front End Technologies: Html CSS Bootstrap Programming
- JSP-Servlet-JSTL-JDBC Programming on Tomcat and MySQL with Eclipse
- JSF 2.0 and PrimeFaces 5.0 Programming on Tomcat with Eclipse
- JPA 2.0 and Hibernate 4.2 Programming with Eclipse
- RESTful Web Services with Jersey JAX-RS 2.0 RI with Eclipse
- SOAP-XML Web Services with JAX-WS RI on Tomcat with Eclipse
- Android SDK Programming with Android Studio

Software Development Specialist - Java – C++ 09/2009 – 12/2014 (5 years 4 months)
Company: TÜBİTAK Informatics and Information Security Research Center

Project 1: Crowd Sourcing Web Application
Responsibilities:
Development of crowdsourcing web application. Admin back-end development.
Technology/Tools: JBoss EAP, Java, JPA , Hibernate, EJB, CDI, JSF, PrimeFaces, Maven, LogBack, JTA, JSON, Ajax, Java Mail, Jenkins, JIRA

Project 2: Simulation Software Development
Responsibilities:
Development of multi-threaded, distributed, HLA based simulation software.
Technology/Tools: Unmanaged C++, Qt4.6, MSVS2005, Boost, MATLAB, C++ Standard Library, Eigen C++ Template Library for application development.

Java Software Engineer 08/2008- 04/2009 (8 months)
Company: Eteration
Project: BPM Implementation for Credit Card Application Process
Responsibilities: Development of BPM/SOA software product.
Technology/Tools: Java, JEE, Icefaces, Hibernate, Spring, JUnit, MVC, Tomcat, Eclipse, Web Services with Axis2, Oracle, Oracle BEA Aqualogic BPM Engine

Education :

Boğaziçi University, Master's Degree, Software Engineering · (2008 - 2010)
Boğaziçi University, Bachelor's Degree, Computer Education && Educational Technology · (2001 - 2006)
